EE364b, Stanford University 23. Interpretation • λ gives prices of resources • subproblems are solved separately, taking income/expense from resource usage into account • master algorithm adjusts prices • prices on over-subscribed resources are increased; prices on undersubscribed resources are reduced, but never made negative EE364b, Stanford University 24 (Same)example subgradient ...

?1-norm Methods for Convex-Cardinality Problems • problems involving cardinality • the ?1-norm heuristic • convex relaxation and convex envelope interpretations • examples • recent results Prof. S. Boyd, EE364b, Stanford University . ?1-norm heuristics for cardinality problems • cardinality problems arise often, but are hard to solve exactly • a simple heuristic, that ...

Stochastic Model Predictive Control - stanford.edu

Prof. S. Boyd, EE364b, Stanford University 9. Certainty equivalent model predictive control • widely used, e.g., in 'revenue management' • based on (bad) approximations: – future values of disturbance are exactly as predicted; there is no future uncertainty – in future, no recourse is available • yet, often works very well Prof. S. Boyd, EE364b, Stanford University 10. Example ...
